The CPMH Orthognathic Surgery System is a **safe, effective and patient-specific solution**, manufactured within strict quality control standards.

The plates developed by state-of-the-art 3D modeling and Additive Manufacturing Technology with high-quality Titanium offer excellent resistance and biocompatibility.

The plates are perfectly adapted to the patient's anatomy for **precise** and **minimally invasive** orthognathic surgery.

The system **provides surgeons** with greater precision due to customized and individualized manufacturing.

The system components include:

- Maxillary Implants
- Mandible Implants
 - Chin Implants
 - Screws
- Surgical Guides
- Biomodels

All components are supplied **sterile**.
